

# PROJECT PROFILE

## ***For immediate release 11/15/13***

The new Aircraft Carrier Pier at Naval Base San Diego ( Pier 12) is a wonderful example of the use of composites for fendering applications. Both the Camels and the Fender Piles are made of FRP Composite material and were specified by the Navy for their incredible recoverable deflection qualities, life expectancy and low maintenance costs.

The Navy has turned to composites more and more for safe berthing and mooring applications. Harbor Technologies of Maine is a leader in manufacturing these products and more information on the Harbor Camel and the Harbor Pile can be found at:
